**The variety is endless and so are the uses.**

Embellish the top of a garden wall with napoleon, ridge or round cap brick. Emphasize your building’s base with a bullnose, sloped or ogee watertable. Make a dramatic entrance with a gothic, tudor or parabolic arch.

Wherever your mind goes, brick’s natural flexibility can get you there.

Brick shapes can be produced in a vast array of sizes, colors and styles, as both extruded and molded units. Many of the shapes illustrated here are standard items that are readily available from local brick manufacturers and distributors, which makes them an easy and inexpensive way to create hallmark designs. Or, design your own custom shape to meet a specific idea or need.

Use this guide as a tool for exploring brick’s flexibility. You’ll discover that imagination and inspiration are the only limitations to brick as a design solution.

How to order custom shapes.

The shapes shown in this publication are considered standard shapes within the brick industry and are generally available from most manufacturers. There are, however, occasions which call for custom shapes to be designed for a particular project. If you need to design a custom shape, please keep in mind it is more economical to create it from a standard slug of clay.

We suggest you follow the guidelines below and consult with your sales representative when ordering custom shapes:

1. Provide a scale drawing to the manufacturer including the following information:
   a. Brick identification (name, shade number, etc.)
   b. Quantity required
   c. Dimensions of all sides
   d. Degrees of all angles
   e. Radius (where applicable)
   f. Exposed surfaces to be faced.

2. Dimensional tolerances consistent with ASTM C-216, Type FBS (or FBX if specified), angular tolerance ±3°.

3. Orders for special shapes may not be cancelled, in whole or in part, once manufacturing has begun.

4. Small quantities of certain shapes may include a set-up charge, in addition to the unit price.

5. "Add on" orders of special shapes which are placed after the original quantity of shapes have been manufactured may be subject to a set-up charge. Color match may not be guaranteed when shapes are ordered after the face brick have been manufactured.

6. Slight variations of color and/or texture may occur with certain shapes.

Endless variety. Endless uses.

To learn more about the infinite varieties of shapes, colors and textures available, or how to design and order custom shapes, contact your local distributor or manufacturer.

Brick shapes. Your design solution.
